2025 SASKATCHEWAN DAIRY CONFERENCE

"Path to Profitability"

November 18th & 19th, 2025
 Saskatchewan A, B, C Rooms
 Saskatoon Inn and Conference Centre, Saskatoon

The Saskatchewan Dairy Conference was held on November 18–19 at the Saskatoon Inn. As always, the event provided an excellent opportunity for producers, service providers, and industry experts to connect.

This year's program focused on the future landscape of the dairy sector, improving on-farm efficiencies, and raising awareness about the mental health of producers.

Attendees heard from a range of excellent speakers. Dr. Steve Eicker, veterinarian and founder of Dairy Comp 305, discussed the relationship between cow care, sustainability, and farm profitability.

Graeme Crosbie of Farm Credit Canada provided insight into current trade agreements and the challenges facing Canada's dairy industry.

Sharalee Laventure from Sask Ag Matters highlighted the importance of recognizing the people behind each operation and prioritizing producer mental health.

A strong theme throughout the conference was preparing for the future—adapting production practices as needed and responding to evolving industry demands. The panel session, "Adjusting Butterfat and Protein Content of Milk to Meet Processor Demand," presented by Leland Fuhr, Dr. Greg Penner, and Dr. Shari van de Pol, offered valuable guidance on changing processor expectations and on managing the upcoming component pricing ratio change coming into effect on April 1, 2026.

SaskMilk was also proud to recognize producers who achieved exceptional milk quality over the past year during the social evening organized by the Saskatchewan Holstein Branch. We extend our sincere congratulations to all honourees on their accomplishments.

Leonard Wipf concluded his Board term at this year's AGM.

SaskMilk would like to thank Leonard for his years of service (2016-2025) on the Board of Directors, and wish him all the best in the future!

We look forward to seeing everyone again next year and thank our sponsors for their support of our event.

DFC Update

Register now for DFC's 2026 Annual Dairy Policy Conference, February 3 – 5

Foundations for the Future

The context shaping Canada's dairy sector is more dynamic than ever. Technology and data drive agricultural innovation. Consumers values are evolving. Global trade pressures highlight the need for food security and sovereignty.

For decades, a strong, united dairy sector has provided the foundation to adapt and lead with confidence. As 2026 approaches, the need to strongly advocate for federal policies that reflect rural and agricultural realities is more critical than ever.

Join Dairy Farmers of Canada from February 3 to 5, 2026 at the Fairmont Château Laurier in Ottawa, Ontario for the Annual Dairy Policy Conference. We will explore some of the most compelling topics for our industry and how a strategic, coordinated approach will help build foundations for the future.

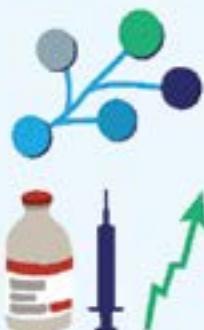

Register now and reserve a hotel room at a special rate at <https://na.eventscloud.com/website/89516/eng/home/>. For those who cannot make it to Ottawa next February, **virtual registration is free for dairy farmers**.

Navigating Antimicrobial Use, Resistance, and Stewardship

Antimicrobial is a term that describes substances that kill or stop the growth of harmful bacteria, fungi, and viruses.

Antibiotics are commonly used to treat animals with an ongoing bacterial infection, or in some cases, to prevent an infection from developing.

Antimicrobial resistance (AMR) occurs when germs (like bacteria) no longer respond to the substances that were once able to kill them. Development of resistance can occur several ways:

Evolution of germs: Over time, bacteria and other germs evolve. The process of evolution can result in changes that help germs survive antimicrobial treatments that would have previously killed them.

Overuse and misuse: When antimicrobials are used too often or are not used according to the label or prescribed instructions, germs can become resistant. For example, using antibiotics when they are not needed, or using them at a lower rate than prescribed can help bacteria to develop resistance.

Spread of resistant germs: Once a resistant germ develops and infects an animal, it could spread between animals and from animals to humans. Spread can occur through direct contact with the animal, or through contact with contaminated feed, water, or environments.

Concerns Around AMR and the Urgency of One Health

Human health challenges of AMR

Increased difficulty treating infections due to less effective antimicrobials

Increased mortality rates from resistant infections that cannot be treated

Fewer and poorer treatment options for resistant infections

Animal health challenges of AMR

Poor animal health outcomes & lower productivity

Increased costs to treat animals & losses due to lower productivity

Spread of resistant infections from animals to humans

What can we do about AMR?

The key is good antimicrobial stewardship!

Antimicrobial stewardship is a set of actions that aim to use antimicrobials in a way that ensures they remain effective in the long run. Antimicrobial stewardship on dairy farms follows a step-by-step process, with the herd veterinarian serving as a guide.

The 5Rs of Antimicrobial Stewardship And what they mean in practice!

Responsibility

Antimicrobial stewardship is a shared responsibility. A team-based approach that includes advisors like veterinarians as well as everyone on the farm is essential.

Reduction

Reduction in the use of antimicrobials largely surrounds focusing on disease prevention. Examples could include:

- ✓ Testing calves for transfer of passive status immunity confirms colostrum management effectiveness and supports reduced AMU by promoting healthier calves.
- ✓ Evaluating and revising biosecurity practices to prevent pathogens, like *Salmonella Dublin*, from entering the farm.
- ✓ Modifying mastitis vaccination program to reduce clinical cases of mastitis.

Replacement

Consider what swaps we can make to the antimicrobials we use. For example:

- ✓ Use lower priority antibiotics to treat metritis (e.g. penicillin instead of ceftiofur).
- ✓ Consider non-antimicrobial alternatives that can be used to promote health or reduce disease.

Refinement

Use the right antimicrobial for the right animal at the right time. Some key examples of refinement in the dairy industry include:

- ✓ Using on-farm cultures to selectively treat clinical mastitis cases.
- ✓ Weighing cattle to ensure correct dose of antibiotics is administered.
- ✓ Schedule time for the veterinarian to meet with the team and review criteria for disease treatment.

Review

- ✓ Review of health records to estimate the rate of respiratory disease in calves.
- ✓ Review of health records to estimate the rate of mastitis.
- ✓ Benchmark antimicrobial use within a veterinary clinic.

Star City Colony		After Hours	Ruben Tschetter Ph: 306-921-9381

Quota Exchange

The market-clearing price established for the December 2025 Quota Exchange was

\$41,009.00

The next Quota Exchange will be held on **January 15, 2026**. All offers to sell and bids to purchase quota through the Quota Exchange must be submitted by midnight, **January 6, 2026**. SaskMilk recommends that offers and bids be submitted well in advance of the deadline date to ensure adequate time for corrections, if necessary.

When making bids on the Quota Exchange, the price on offers to sell quota is the minimum price that the producer is prepared to accept for that quota. Only if the market-clearing price is equal to or greater than the producer's minimum price will that producer qualify for participation in the Exchange.

Conversely, the price on offers to purchase quota is the maximum price that the producer is prepared to pay for that quota. Only if the market-clearing price is equal to or less than the producer's maximum price will that producer qualify for participation in the Exchange.

The clearing price is set at the price where the smallest difference exists between the accumulated volume offered for sale and the accumulated volume bid to purchase. The results of the Quota Exchange are outlined in the following table.

NOVEMBER 2025 QUOTA EXCHANGE RESULTS

Market Clearing Price per Kilogram of Butterfat	\$41,009.00
Daily Kilograms Offered to Purchase	110.00
Kilograms Offered to Sell	104.00
Kilograms Sold	90.00
Number of Producers	
- offered to purchase	11
- purchased quota	9
- offered to sell	5
- sold quota	4
